Determining the Right Size

For the most accurate fit, use a measuring tape and have someone help you measure following the instructions as noted below. A leotard, swimsuit or undergarments should be worn when taking measurements, not street clothes. Next, find the measurements on the size chart to determine the appropriate size. It is our experience that when the bust and hip measurements do not correspond with a

particular size, the girth measurement should be used as the deciding factor. A **Girth:** 

Measure from the center of one shoulder, down the front through the crotch and up the back to starting point.

#### B Bust:

With arms relaxed down at the sides, measure the fullest part of bust, keeping tape measure parallel to the floor.

#### C Waist:

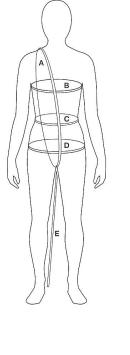

Measure around natural waistline, the narrowest part of the upper body (not over shirt or pants).

#### D Hips:

Measure around fullest part of the buttocks, keeping tape measure straight and parallel to the floor.

#### E Inseam:

Measure inside of leg, from crotch to just below the ankle bone.
